Movement and Mental health in Children

Lin, Wang (Data collector)¹ 

Show affiliations

Overview

This dataset contains physical activity data collected from children using Apple Watch Series 7 and mental health assessments, including Strengths and Difficulties Questionnaire(SDQ) and Swanson, Nolan, and Pelham Version IV Scale (SNAP-IV Scale). It also includes demographic variables such as age, sex, and BMI. The dataset aims to support research on the relationship between movement patterns and mental health outcomes in children.

Data Collection

Participants: primary school students (aged 6–13 years) .

Ethical Approval: The study was conducted following ethical guidelines, with approval granted under approval number 202309801.

Consent: Written consent was obtained from all participants' guardians before data collection.

Data Sources & Measurements

Accelerometer-Based Physical Activity Data

Collected using Apple Watch Series 7 (100Hz sampling rate).

Processed into raw acceleration signals and transformed into features representing movement patterns.

Includes spatial-temporal movement characteristics for activity classification.

Mental Health Assessment

Strengths and Difficulties Questionnaire: Evaluates emotional and behavioral attributes.

Swanson, Nolan, and Pelham Version IV Scale: Assesses attention-deficit/hyperactivity disorder (ADHD) symptoms.

Demographic and Physiological Data

Age, sex, and BMI (Body Mass Index) were recorded for each participant.

Potential Applications

Multimodal deep learning research combining physical activity and mental health indicators.

ADHD classification using accelerometer-derived movement data.

Longitudinal studies on the impact of physical activity on children's psychological well-being.

Notes

This dataset includes physical activity data, demographic information, and mental health assessments collected from children using Apple Watch Series 7. The dataset consists of multiple CSV files, each containing different aspects of the recorded data:

- id_T.csv: Contains one-hour aggregated activity
- id_F.csv: Includes activity fragments
- Demographic and mental health data (CSV format):
 - Demographic variables: Age, sex, and BMI.
 - Mental health assessments:
 - Strengths and Difficulties Questionnaire (SDQ)
 - Swanson, Nolan, and Pelham Version IV (SNAP-IV) Scale for ADHD assessment

This dataset is structured to support research on the relationship between physical activity patterns and mental health outcomes in children. Some demographic data may be missing, and users are expected to handle the missing values as needed.
